#### INTERNATIONAL SEARCH REPORT

International application No. PCT/KR 2004/002435

#### Continuation of first sheet

Continuation No. IV:

Text of the abstract

(Continuation of item 5 of the first sheet)

Disclosed are a terminal of an OFDMA-TDMA wireless Internet system capable of reducing transmission delay time while securing QoS for uplink data and a packet transmission method. A MAC layer (200) of the terminal is divided into a MAC software part (210) and a MAC hardware part (220) to control priorities of data packets at a high level and low level. The high level priority controller (213) carries out various fine control operations according to a QoS policy and the low level priority controller (222) performs mechanical control operations based on a predetermined simple fixed priority policy.

Form PCT/ISA/210 (continuation of first sheet (0)) (January 2004)
